

## After Surgery Care

**The cat** is still under sedation after surgery. He needs to recover overnight in the trap. He can be released the morning of the day after surgery.

Optional: Around 9-10 pm, you may slide some wet food (about one tablespoon) mixed with water (a little less than one teaspoon) on a flat plate into the trap. Do not open the trap door more than half an inch.

Optional: If the cat has urinated or defecated on the paper in the trap, you may remove the entire sheet of paper and replace it with clean newspaper. Do not open the trap door more than half an inch.

**The traps** can be returned to the Tinley Park holding facility or to any of the three TNR workshops held every month. For details, call our hot line 708 738 1438 or email [info@tripleRpets.org](mailto:info@tripleRpets.org).

Return the traps as soon as possible. Turn around time is usually two weeks. If you need the traps longer, contact 708 738 1438 or email [info@tripleRpets.org](mailto:info@tripleRpets.org).

Please **clean the traps** before you return them. Remove all paper and dishes. Remove all feces, food or other garbage before you give the traps back to us. Then hose the traps with water from a garden hose.
